The summaries and translations in this report are prepared with AI. Before making important decisions, please check the source through the link provided with each item.

GitHub Trending

8 highlights

01 alibaba/open-code-review back in the spotlight

Developed by Alibaba, open-code-review offers a hybrid architecture that combines deterministic pipelines and large language models (LLMs) to automate code review processes. The tool uses multilingual rule sets to detect security vulnerabilities while providing the ability to comment at the line level.

Go · ★ 50,784 · +215 today https://github.com/alibaba/open-code-review Report an error

02 backnotprop/plannotator

plannotator is a platform that combines planning, code review, and feedback processes for artificial intelligence agents into a single workspace. Developed with TypeScript, this tool allows teams to manage their interactions with agents and transfer feedback directly to the agents.

TypeScript · ★ 10,533 · +108 today https://github.com/backnotprop/plannotator Report an error

03 louislam/uptime-kuma

Uptime Kuma is a monitoring tool with a visual interface that you can host on your own server. This JavaScript-based application, which allows you to track the operational status of websites and services, offers a user-friendly experience.

JavaScript · ★ 93,934 · +71 today https://github.com/louislam/uptime-kuma Report an error

04 block/buzz back in the spotlight

Developed by Block, Buzz is a communication platform where humans and artificial intelligence agents coexist in the same workspaces. Written in Rust, this self-hostable project aims to provide a collaborative work environment.

Rust · ★ 37,336 · +97 today https://github.com/block/buzz Report an error

05 tradermonty/claude-trading-skills

tradermonty/claude-trading-skills offers Claude Code skills that automate processes such as market analysis, technical charts, and strategy development for stock investors and traders. Prepared in the Python language, this project aims to support financial data processing with economic calendar and browser tools.

Python · ★ 4,266 · +69 today https://github.com/tradermonty/claude-trading-skills Report an error

06 tailscale/tailcat back in the spotlight

Developed by Tailscale, tailcat is a version of the netcat tool used to monitor and route network traffic, running on the Tailscale data plane. This open source software allows for the creation of WireGuard-encrypted tunnels between two machines without the need for the Tailscale control plane.

Go · ★ 9,540 · +256 today https://github.com/tailscale/tailcat Report an error

07 Likely7/Veyra-NRVideo

Veyra-NRVideo is an advanced Windows video player and recording enhancement tool that offers real-time preview for videos and image sources. It aims to improve the visual experience by using AI-powered super resolution, image enhancement, and frame generation technologies.

C++ · ★ 1,692 · +256 today https://github.com/Likely7/Veyra-NRVideo Report an error

---

08 ChromeDevTools/chrome-devtools-mcp back in the spotlight

ChromeDevTools/chrome-devtools-mcp allows coding agents (such as Antigravity, Claude, Cursor, or Copilot) to inspect and control a live Chrome browser. Offered as a Model Context Protocol server and command-line interface, this tool provides AI assistants with access to browser tools for debugging and performance analysis.

TypeScript · ★ 55,605 · +67 today https://github.com/ChromeDevTools/chrome-devtools-mcp Report an error

01 FAA issues national ground stop – lifted 4.5 hours later

The U.S. Federal Aviation Administration (FAA) decided to ground all departures nationwide for safety reasons. The flight ban in question was lifted after approximately 4.5 hours.

02 Reverse engineering my Coway air purifier to ditch the cloud

The user reverse-engineered the Coway Airmega air purifier to eliminate reliance on cloud-based services. This study details the technical processes that allow the device to be controlled over a local network.

03 AI unlocks Gödel's notebooks, said to contain hundreds of proved theorems

Artificial intelligence technology is being used to analyze 1,009 pages of notes left by mathematician Kurt Gödel, written in an old shorthand system. This study reveals that the notes contain hundreds of proven theorems.

04 $11.4M in Nvidia hardware vanishes during shipment from CA to TX

It has been reported that $11.4 million worth of Nvidia hardware, being shipped from California to Texas, went missing during transit. While Oakland police have launched an investigation into the theft, there is no clear information yet regarding the identity of the shipping company or the process of the disappearance.

01 Qwen/Qwen3.8-27B back in the spotlight

Qwen/Qwen3.8-27B, published on Hugging Face, is an AI model capable of converting visual and text inputs into text outputs. Introduced as the most capable version of the Qwen open model family, this model aims to continue the success of previous versions adopted by the community.

01 Who Remembers What? Multi-Granularity Memory Extraction for Multi-User, Multi-Agent Interaction

The article published on Hugging Face introduces the MixUA system, which manages memory sharing in multi-user and multi-agent environments. The system parses information obtained from interactions between users and large language models (LLMs) and shares it among agents within the framework of privacy rules.

02 EgoX: Egocentric Cross-Embodiment Manipulation with Embodiment Dreaming

EgoX, shared by Hugging Face, is a learning framework that aims to bridge the experience gap between humans and robots with different physical structures and control interfaces. The system enables the development of robotic manipulation policies by organizing heterogeneous representations through semantically matched observation and action modalities.

03 Back to Pixels: Lifting Latent Video Diffusion into Pixel Space

The paper 'Back to Pixels: Lifting Latent Video Diffusion into Pixel Space' addresses the limitations of latent space compression used in video generation models regarding the creation of high-resolution and interactive content. The method, called PixVid, aims to overcome these limitations by moving pre-trained latent video models directly into pixel space.

04 Consensus Capture in Reference-Based UAV Video Stabilization: A Benchmark on Dynamic Urban Scenes

Consensus Capture in Reference-Based UAV Video Stabilization: A Benchmark on Dynamic Urban Scenes is a study that examines the erroneous matches caused by moving objects in image stabilization processes for unmanned aerial vehicle (UAV) videos. The research presents a new benchmark to evaluate the impact of dynamic movements in urban areas on reference-frame-based stabilization methods.

05 TurtLES: A Large-Scale Benchmark for Turbulent 3D Neural PDE Surrogates

TurtLES is a large-scale dataset prepared for artificial intelligence models developed to accelerate computational fluid dynamics processes. Including 3D turbulent flows, this study provides a benchmark tool to measure the performance of models with realistic and time-dependent data.

📖 Glossary of Industry Terms

11 terms

pipelines

These are workflows that allow the steps in a software process to follow one another and occur automatically.

LLM

These are artificial intelligence models trained on massive amounts of data that can understand human language and generate text.

---

self-hostable

These are software programs that can be run on the user's own computer or server without the need for a third-party server.

---

skills

These are specialized capabilities or functions acquired by artificial intelligence models to perform operations in a specific field.

---

data plane

It is the fundamental infrastructure layer where data on a network is actually transmitted and routed.

---

open source

Software whose source code is open for anyone to inspect, modify, and share.

---

super resolution

It is a technology that makes low-resolution images clearer and higher-resolution with the help of artificial intelligence.

---

frame generation

It is a method of inserting new frames between existing frames using artificial intelligence to make the image flow smoother.

Model Context Protocol

It is a communication protocol that allows artificial intelligence models to connect to different data sources and tools in a standard way.

FAA

It is the official agency that regulates and oversees civil aviation in the United States.

---

reverse engineering

It is the process of taking a device or software apart to understand how it works and to analyze its operating logic.
