5 highlights

01 cloudflare/security-audit-skill

back in the spotlight

Developed by Cloudflare, security-audit-skill is a coding-agent skill designed for multi-stage security audits. It aims to standardize security audits in software development processes by providing machine-readable and independently verified findings.

JavaScript · ★ 37,749 · +2,012 today https://github.com/cloudflare/security-audit-skill Report an error

02 DietrichGebert/ponytail

back in the spotlight

DietrichGebert/ponytail is a JavaScript project that directs AI agents to act like the laziest senior software engineer by minimizing the code-writing process. Adopting the principle that the best code is the code that is not written, it aims to address efficiency in development processes with a different approach.

JavaScript · ★ 172,377 · +2,079 today https://github.com/DietrichGebert/ponytail Report an error

03 supabase/supabase

back in the spotlight

Supabase is a development platform that offers a dedicated Postgres database for building web, mobile, and artificial intelligence applications. Written in the TypeScript language, this project aims to simplify database management and application development processes.

TypeScript · ★ 113,222 · +504 today https://github.com/supabase/supabase Report an error

04 twentyhq/twenty

back in the spotlight

Twenty offers an open-source alternative to the customer relationship management software Salesforce. This platform is being developed with a focus on artificial intelligence integration.

TypeScript · ★ 59,448 · +112 today https://github.com/twentyhq/twenty Report an error

05 strelov1/freehire

Developed with the Go language, freehire is an open-source (source code accessible and open for development by anyone) search engine designed for job seekers. It provides a platform that allows users to scan and find job postings.

01 PHP 8.2.35

PHP 8.2.35 is a new security update released for PHP, a server-side scripting language. This version has been made available to users as part of ongoing efforts to improve the overall security of the software.

1,029 points · 545 comments https://github.com/php/php-src/releases/tag/php-8.2.35 Report an error

02 Today's PHP security release, and how we're strengthening security

The PHP Foundation announced the security update that comes with PHP 8.2.35 and shared its new strategies for improving the overall security of the software. This work aims to address security vulnerabilities and strengthen defense mechanisms for PHP, a server-side scripting language.

731 points · 362 comments https://thephp.foundation/blog/2026/10/21/todays-php-security-release-and-how-were-strengthening-php-security/ Report an error

03 Meta ordered to pay $25B penalty in New Mexico Cambridge Analytica case

The state of New Mexico has ordered the social media company Meta to pay a $25 billion fine as part of the Cambridge Analytica lawsuit. The decision emerged as a result of the legal process regarding the company's practices concerning user data privacy and security.

04 There isn't an easy exploit for this PHP vulnerability

It is stated that a security vulnerability in PHP does not have a structure that is easily exploitable, contrary to popular belief. By examining the technical details of the vulnerability in question, it is explained why it is difficult for attackers to exploit this flaw.

05 Compromised LiteLLM 1.107.0 on PyPI Installs a Credential Stealer and Backdoor

LiteLLM version 1.107.0 was replaced on the Python Package Index (PyPI) with malicious code containing a backdoor that steals credentials. LiteLLM, a library used by software developers to integrate language models, put user data at risk with this security breach.

508 points · 168 comments https://safedep.io/litellm-pypi-compromise-credential-stealer-backdoor/ Report an error

5 highlights

01 SpatialScout: Can VLM Agents Actively Explore and Map 3D Scenes?

SpatialScout is a benchmark tool that measures the ability of vision-language models to map 3D scenes and exhibit object-level spatial intelligence through active exploration. Containing eighty different indoor scenes, this study aims to evaluate whether models can create a consistent world representation during autonomous exploration processes.

50 likes · 2 comments https://huggingface.co/papers/2610.26659 Report an error

02 From VLM Planners to Robotic Agents: Self-Evolving Harnesses for History-Dependent Manipulation

Vision-language-action models offer successful results by combining visual understanding and action generation processes in robotic manipulation tasks. This article proposes self-improving systems to manage dependencies based on past interactions and reduce execution errors in long-term tasks.

03 CompactSplat: Spatially Adaptive Gaussian Distribution for Feedforward Scene Reconstruction

CompactSplat is a method that reconstructs 3D scenes from sparse images and uses a spatially adaptive Gaussian distribution instead of distributing equally to every pixel. This approach aims to increase geometric accuracy and texture details without the need for scene-based optimization.

04 Right Screen, Wrong Transition: World Models as Verifiers for GUI Agents

The article published on Hugging Face argues that security auditing for graphical user interface (GUI) agents should focus not only on the screenshot but also on the expected transition process following the performed action. It aims to detect security vulnerabilities in interface interactions by integrating the outputs of existing world models into verification processes from formats such as text or code.

05 PACE: Periodic and Channel-Aligned Encoding of Four-Bit Recurrent States

PACE, shared on Hugging Face, is a method that encodes recurrent states used in linear-attention-based language models with four-bit precision. This technique reduces memory usage during inference, allowing more sequences to be processed simultaneously.

📖 Glossary of Industry Terms

5 terms

coding-agent skill

A specialized capability module developed by Cloudflare, used to automatically perform software security audits.

LLM

Artificial intelligence models trained on massive data that can understand human language and generate text.

---

skill

It is a specialized skill or plugin that artificial intelligence agents use to perform a specific task.

---

exploit

It is a method used to take control of or cause a software or system to malfunction by exploiting its security vulnerability.

---

backdoor

It is malicious code secretly embedded into software that provides unauthorized access by bypassing the system's security measures.

---
