Today's New Trends

July 13, 2026 (Monday)

A Few Sips

This report includes the trends that stood out today for the first time, without repeating what we have shared in recent days.

10 GitHub Trending **4** Hacker News **1** HuggingFace · Daily Models

The summaries and translations in this report are prepared with AI. Before making important decisions, please check the source through the link provided with each item.

GitHub Trending

10 highlights

01 Dicklesworthstone/destructive_command_guard

Destructive Command Guard is a security layer developed to prevent dangerous git and shell commands run by artificial intelligence agents. Written in Rust, this tool reduces the risks of unwanted data loss or system damage by auditing command execution processes at the system level.

Rust · ★ 3,284 · +444 today https://github.com/Dicklesworthstone/destructive_command_guard

---

02 PrefectHQ/prefect

Prefect is a workflow orchestration framework used to create Python-based data pipelines. Designed to develop resilient data processes, this tool enables management and monitoring of complex data workflows.

Python · ★ 23,248 · +66 today https://github.com/PrefectHQ/prefect

---

03 Shubhamsaboo/awesome-llm-apps

The awesome-llm-apps repository offers more than 100 directly executable AI agents and RAG application examples. These Python-based projects allow developers to quickly copy and customize applications and launch them.

Python · ★ 118,879 · +408 today https://github.com/Shubhamsaboo/awesome-llm-apps

---

04 Crosstalk-Solutions/project-nomad back in the spotlight

Project N.O.M.A.D is a portable survival computer that provides access to critical tools, information resources and artificial intelligence support in offline environments that do not require an internet connection. This system, developed with TypeScript, aims to make the data users need accessible under all circumstances by hosting it on local hardware.

TypeScript · ★ 33,924 · +125 today https://github.com/Crosstalk-Solutions/project-nomad

---

05 ColeMurray/background-agents

Developed by ColeMurray, background-agents is an open source background-agents coding system based on TypeScript. It allows developers to create artificial intelligence agents (AI agents) that execute autonomous processes within applications.

TypeScript · ★ 2,329 · +16 today https://github.com/ColeMurray/background-agents

---

06 pingdotgg/t3code

T3Code is a toolset developed to improve and standardize code quality in TypeScript-based projects. It provides automation support to developers in type safety and code editing processes.

TypeScript · ★ 13,814 · +75 today https://github.com/pingdotgg/t3code

---

07 virattt/ai-hedge-fund

The AI hedge fund uses autonomous agents to automate financial market analysis and asset management processes. This Python-based project offers an artificial intelligence team model that develops investment strategies by processing market data.

Python · ★ 61,500 · +115 today https://github.com/virattt/ai-hedge-fund

---

08 chen08209/FlClash back in the spotlight

FlClash serves as a multiplatform proxy client based on ClashMeta. This open source application, developed with Dart language, aims to offer an ad-free and user-friendly interface.

Dart · ★ 45,340 · +154 today https://github.com/chen08209/FlClash

---

09 par274/sharpemu

Sharpemu is an experimental PlayStation 5 emulator project developed in C# language. This study, which aims to imitate the console architecture on a software basis, is a technical experiment carried out on game console emulation technologies.

C# · ★ 1,379 · +314 today https://github.com/par274/sharpemu

---

10 Nutlope/hallmark

Hallmark is a style file developed to reduce the impact of standard content produced by artificial intelligence (AI slop) on the design. Claude Code ensures that the interfaces used in tools such as Cursor and Codex gain a unique and human aesthetic.

CSS · ★ 4,508 · +155 today https://github.com/Nutlope/hallmark

Hacker News

4 highlights

01 Claude Code sends 33k tokens before reading the prompt; OpenCode sends 7k

An analysis of the token usage efficiency of Claude Code and OpenCode tools reveals that Claude Code spends 33 thousand tokens before the prompt is read, while OpenCode spends 7 thousand tokens. This difference shows the impact of the system prompt and context management overhead in developer tools on cost.

541 points · 307 comments https://systima.ai/blog/claude-code-vs-opencode-token-overhead

---

02 Ask HN: Add flag for AI-generated articles

The Hacker News community is discussing whether AI-generated content should be marked with a special label on the platform. It is recommended that this marking system be used only as an indicator to inform readers, without changing the order of the content.

462 points · 240 comments https://news.ycombinator.com/item?id=48886741

---

03 I love LLMs, I hate hype

The approach, which appreciates the technical capacity of large language models, criticizes exaggerated marketing discourses in the artificial intelligence sector. It is argued that these models provide concrete efficiency increases in software development processes, but current expectations contain unrealistic optimism.

396 points · 248 comments https://geohot.github.io//blog/jekyll/update/2026/07/12/i-love-llms.html

---

04 Vint Cerf, “father of the Internet”, is retiring

Vint Cerf, one of the architects of the Internet, is retiring from his position at Google. Cerf, who pioneered the development of TCP/IP protocols, played a critical role in establishing the basic structure of digital networks.

301 points · 176 comments https://techcrunch.com/2026/06/30/the-father-of-the-internet-is-finally-retiring/

HuggingFace · Daily Models

1 highlights

01 conradlocke/krea2-identity-edit

The Krea2-identity-edit model focuses on identity preservation and consistent character creation in visual production processes. This tool is a fine-tuning solution that allows users to reproduce a given subject in different contexts or styles.

📖 Glossary of Industry Terms

11 terms

destructive command guard

Security mechanism that warns you before running commands that risk deleting data or corrupting the system.

shell

The underlying software layer that allows you to communicate with the computer's operating system directly via text commands.

workflow orchestration framework

Software infrastructure that organizes complex business processes, tasks and the order in which these tasks follow each other.

AI agent

Autonomous artificial intelligence software that can make decisions and use tools on its own to achieve a specific goal.

RAG

A method that enables artificial intelligence to produce more accurate answers by looking at current or special documents other than its own training data.

offline

It works without the need for an internet connection, using only the device's own resources.

AI agents

AI units that can plan and execute missions on their own and use a variety of digital tools to achieve goals.

user experience

The ease, speed, and overall level of satisfaction you feel when using an app or device.

interoperability

The ability of different brands or types of software and hardware to exchange data with each other without any problems.

type safety

A security rule that reduces the possibility of the program making errors by preventing the wrong type of data from being used when developing software.

AI hedge fund

A type of investment fund that makes investment decisions with advanced artificial intelligence algorithms instead of human intervention.
