10 highlights

01 THU-MAIC/OpenMAIC

OpenMAIC is an immersive learning platform that simulates multi-AI agent interactions with a single click. Developed with TypeScript, this open-source tool allows users to experience an interactive classroom environment with different agent models.

TypeScript · ★ 25,572 · +1,370 today https://github.com/THU-MAIC/OpenMAIC

---

02 majd/ipatool

Developed by Majd, ipatool is a command-line tool that allows you to search for and download application packages (IPA files) for iOS, iPadOS, tvOS, and visionOS from the Apple App Store. Written in Go, this tool facilitates package management processes for software developers and researchers by providing direct access to application files.

Go · ★ 10,388 · +58 today https://github.com/majd/ipatool

---

03 jingyaogong/minimind

MiniMind is a Python project that enables training a 64-million parameter large language model from scratch in as little as two hours. It provides a practical learning environment for users with limited hardware resources to understand the operating principles of AI models.

Python · ★ 55,708 · +472 today https://github.com/jingyaogong/minimind

---

04 Osmantic/ODS

Osmantic/ODS is an open-source platform that transforms personal computers into AI servers capable of LLM inference, audio processing, and image generation. The software allows for the creation of retrieval-augmented generation (RAG) and intelligent agent workflows running on local hardware.

Python · ★ 5,181 · +331 today https://github.com/Osmantic/ODS

---

05 checkstyle/checkstyle

Checkstyle is an analysis tool that helps Java programmers develop software in accordance with established coding standards. It audits code quality by supporting standards such as the Google Java Style Guide and Sun Code Conventions.

Java · ★ 9,288 · +115 today https://github.com/checkstyle/checkstyle

---

06 kaifcodec/user-scanner

Developed in Python, User-Scanner is an open-source intelligence (OSINT) tool that collects data from over 465 different sources using a single email address or username. Designed for security researchers and digital footprint trackers, the software offers in-depth data analysis with a wide range of scanning vectors.

Python · ★ 3,910 · +462 today https://github.com/kaifcodec/user-scanner

---

07 every-app/open-seo back in the spotlight

Open SEO offers an open-source alternative to paid search engine optimization (SEO) analysis tools (Semrush, Ahrefs). Developed with TypeScript, this software provides the essential data needed to track website performance and search visibility for free.

TypeScript · ★ 15,451 · +469 today https://github.com/every-app/open-seo

---

08 p-e-w/heretic back in the spotlight

Heretic is a Python tool that automatically removes censorship mechanisms in language models. It allows large language models (LLMs) to bypass restrictions and generate a wider range of responses.

Python · ★ 29,400 · +369 today https://github.com/p-e-w/heretic

---

09 handsomestWei/patent-disclosure-skill

Patent disclosure skill is a Python tool that automates the processes of identifying inventive steps in patent applications and preparing technical disclosure texts. It provides support for interpreting patents clearly, tracking policy changes, and generating responses for examination processes.

Python · ★ 6,058 · +62 today https://github.com/handsomestWei/patent-disclosure-skill

---

10 pollen-robotics/microduck_rl

microduck_rl, developed by Pollen Robotics, offers reinforcement learning training environments for the Microduck robotic platform. This Python-based library facilitates the development of robotic control algorithms on the physics-based simulation tool mjlab.

Python · ★ 1,001 · +168 today https://github.com/pollen-robotics/microduck_rl

Hacker News

5 highlights

01 Creepy Crawlies

Web crawlers on the internet use methods that push the boundaries of ethical limits and server loads during data collection processes. This triggers debates regarding the management of automated bot traffic, which consumes website resources and raises privacy concerns.

Discussion: news.ycombinator.com/item?id=49491791 (1,185 points · 594 comments)

---

02 “I just chose words carefully”

Prompt engineering, used to improve the outputs of artificial intelligence models, relies on the precise use of language rather than complex techniques. It is argued that using clear and selective words to guide the model's logic is more effective than technical complexity for achieving desired results.

834 points · 214 comments https://unsung.aresluna.org/i-just-chose-words-carefully/

Discussion: news.ycombinator.com/item?id=49503601 (834 points · 214 comments)

---

03 Haiku R1/beta6 has been released

Haiku, the open-source successor to the BeOS operating system, has been updated to version R1/beta6. The new version expands hardware driver support and offers bug fixes that improve system stability.

326 points · 92 comments https://www.haiku-os.org/news/2026-08-26_haiku_r1_beta6

Discussion: news.ycombinator.com/item?id=49499867 (326 points · 92 comments)

---

04 Hacking IKEA Furniture

IKEA hacking, the practice of personalizing and modifying the functions of IKEA furniture, aims to redesign standard products according to user needs. This approach offers the opportunity to create unique home furnishings by using ready-made furniture parts for different purposes.

324 points · 236 comments https://greenlightning.eu/diy/hacking-ikea-furniture/

Discussion: news.ycombinator.com/item?id=49497810 (324 points · 236 comments)

05 Arbitrary code execution in QubesOS via copy-to-VM error reporting backchannel

An arbitrary code execution vulnerability has been detected in the security-focused operating system QubesOS, via the error reporting mechanism in the copy-to-VM process. This vulnerability allows attackers to bypass the system's isolation layers and perform unauthorized operations.

238 points · 95 comments https://www.qubes-os.org/news/2026/08/29/qsb-118/

Discussion: news.ycombinator.com/item?id=49496918 (238 points · 95 comments)

01 unsloth/Qwen3.8-Flash-Next-GGUF

Qwen3.8-Flash-Next-GGUF, offered by Unsloth, is a multimodal artificial intelligence model capable of processing visual and text data. Thanks to its compressed file format (GGUF), which can run with low hardware requirements, the model allows for fast inference on local devices.

♥ 616 · 373,029 downloads https://huggingface.co/unsloth/Qwen3.8-Flash-Next-GGUF

5 highlights

01 GGSS: Geodesic-Gated Spherical Steering for Inference-Time Debiasing of Generative Vision-Language Models

Geodesic-Gated Spherical Steering (GGSS) is a method that reduces demographic biases exhibited by generative vision-language models when producing outputs. This technique allows the model to explore a counterfactual bias subspace while maintaining the norm during inference-time.

2 likes · 1 comments https://huggingface.co/papers/2608.25375

---

02 Language Chain in Alignment: Cross-lingual Ranking Preference Optimization

Cross-lingual Ranking Preference Optimization enables large language models to perform better in languages other than English-heavy datasets. This method improves the alignment process of models in different languages by transferring preference information from English data to the target language.

2 likes · 1 comments https://huggingface.co/papers/2608.23149

---

03 Agentic Artifact Creation: Systems, Evaluation, Principles, and Opportunities

The creation of tangible outputs such as text, code, or images from natural language by artificial intelligence systems moves generative AI processes from drafting to final product delivery. The agentic artifact creation approach focuses on the system observing its own outputs to iteratively improve the process and produce reliable results.

41 likes · 1 comments https://huggingface.co/papers/2608.28122

---

04 DART-SD: Diamond-topology Aware Retrieval and Tuning for Self-Distillation of Multi-Turn Tool-Calling Agents

DART-SD is a training method developed for artificial intelligence agents with multi-step tool-calling capabilities. The method aims to reduce performance losses experienced in traditional linear training processes by modeling different solution paths in complex tasks using a diamond lattice structure.

56 likes · 1 comments https://huggingface.co/papers/2608.18524

---

05 Locate Anything in Videos: Rethinking Efficient Generative Spatio-Temporal Video Grounding

Parallel Tube Decoding shortens processing time by dividing object positioning operations in videos into temporal blocks. This method aims to solve the latency and error accumulation problems encountered by traditional multimodal large language models when performing sequential processing.

02 But where does taste come from?

The origin of taste mechanisms that determine users' digital content preferences is shaped by individual experiences and community interactions beyond algorithmic recommendation systems. This process questions the role of technological filters in the formation of personal tastes while emphasizing the social and cultural context of original content discovery.

49 points · 7 comments https://dustycloud.org/blog/but-where-does-taste-come-from/

Discussion: lobste.rs/s/9naffr/where_does_taste_come_from (49 points · 7 comments)

03 The U.S. is more than just the US (according to the ISO)

The International Organization for Standardization (ISO) defines the United States (US) in its country code standard as a whole, including not only its mainland but also its outlying territories. This situation requires software developers to re-evaluate the geographical scope of country codes used when processing location data through technical standards.

7 points · 3 comments https://trevmex.com/post/826439929093636096/the-us-is-more-than-just-the-us-according-to

Discussion: lobste.rs/s/ngqpa1/u_s_is_more_than_just_us_according_iso (7 points · 3 comments)

📖 Glossary of Industry Terms

12 terms

large language model

Artificial intelligence models trained on vast amounts of data that can understand human language and generate text.

LLM inference

The process of a trained artificial intelligence model generating a response to a given question.

RAG

A method that enables artificial intelligence to provide more accurate answers by retrieving information from current or specific documents.

Google Java Style Guide

A set of rules established by Google used to ensure that code written in the Java language is organized and readable.

Sun Code Conventions

A series of standards created by the company that developed the Java language, recommended to be followed when writing code.

OSINT

A method of collecting and analyzing information from publicly available sources on the internet.

SEO

Improvement efforts made for websites to appear higher in search engine rankings.

LLM

Artificial intelligence systems trained on massive amounts of text data that can converse like a human.

---

patent disclosure

The disclosure of all details of an invention to the public or the relevant institution so that it can be legally protected.

---

reinforcement learning

The process of artificial intelligence learning to make correct decisions through trial and error and using a reward mechanism.

---

web crawlers

Software bots that automatically browse pages on the internet and record data.

---

prompt engineering

The art of optimizing the prompts given to artificial intelligence to get the best and most accurate results from it.
