4 highlights

01 macro-inc/macro

back in the spotlight

Macro is a platform that combines tools such as email, chat, documents, task management, AI agents, calls, and customer relationship management (CRM) into a single workspace. It aims to facilitate team collaboration by connecting all these workflows through a shared AI memory.

Rust · ★ 5,510 · +117 today https://github.com/macro-inc/macro Report an error

02 expo/skills

expo/skills, developed by Expo, is a collection of skills that provides AI agents with the technical knowledge they need when working with Expo projects and Expo Application Services. This tool helps agents implement Expo APIs and workflows more accurately during application development processes.

Shell · ★ 3,641 · +90 today https://github.com/expo/skills Report an error

03 ruvnet/RuView

back in the spotlight

RuView performs real-time spatial analysis, vital sign tracking, and asset detection using standard wireless network (WiFi) signals without the need for image data. Developed in the Rust language, this project aims to track movements and biometric data in an environment while minimizing hardware requirements.

04 xiaolai/the-craft-of-selfteaching

xiaolai/the-craft-of-selfteaching is a guide prepared in Jupyter Notebook format that focuses on improving self-learning skills. It provides a resource aimed at helping individuals structure their learning processes and build their futures through this method.

01 Apple's git still trusts the compromised eMudhra certificates

Eleven days after receiving notification that the security of the eMudhra certificate authority had been compromised, Apple continues to trust these dangerous certificates in the git, curl, and python3 tools that come with macOS. This situation poses a risk because these tools, which are part of the system's security infrastructure, accept unverified certificates.

02 Why is this fingerprinting script creating bioweapons?

An analysis published on Nullpt.rs reveals that browser fingerprinting scripts are unexpectedly gaining access to datasets related to biological weapons. The technical review details the vulnerabilities of such scripts and their potential risks to data privacy.

03 Gemini 4 Carbon

Gemini 4 Carbon, announced by Google, has been introduced as the company's newest artificial intelligence model. This model represents capabilities developed in line with Google's current technology research.

05 The Grid, a factory-scale robot in Massachusetts that builds PCBs on demand

The Grid, based in Massachusetts, is a factory-scale robotic system that produces printed circuit boards (PCBs) on demand. This technology aims to complete circuit board production in half the time compared to standard rapid manufacturing centers.

01 MiniMaxAI/MiniMax-M3.1-Flash

MiniMax-M3.1-Flash, developed by MiniMaxAI, is a multimodal mixture-of-experts model focused on areas such as coding, cybersecurity, and computer usage. Supporting text, image, and video inputs, the model can process large datasets with a context window capacity reaching up to 1 million tokens.

5 highlights

01 Sensorimotor Alignment: A Platonic Proxy for Embodied Policy Success

Sensorimotor Alignment: A Platonic Proxy for Embodied Policy Success proposes offline methods instead of costly trials to evaluate the performance of robot foundation models. The study examines how motion trajectories, combined with visual and linguistic data, can strengthen the reality perception of artificial intelligence models.

02 TAO: Tool-Aware Joint Scheduling for LLM-Based Agentic Serving

TAO, shared by Hugging Face, is a joint scheduling framework developed to efficiently manage GPU and CPU resources in large language model (LLM)-based agent services. The system aims to reduce resource waste by optimizing transitions between model inference and external tool usage.

03 OmniShowcase: Omnidirectional Subject-Consistent Video Generation from Multi-View Images

OmniShowcase is a method that aims to generate videos with object consistency using multiple reference images. It combines visual data from different perspectives to overcome the limitations of existing subject-to-video approaches, which struggle to predict the unseen parts of an object as the camera angle changes.

04 Efficient Streaming Audio-Visual Target Speaker Extraction for Real-World Acoustic Scenes

The article shared by Hugging Face presents a streaming-based method that extracts the target speaker using audio and visual data in real-world environments. The study aims to operate more efficiently on edge devices by overcoming the limitations of existing systems, such as high latency and hardware requirements.

05 DTCA: Denoising Token Credit Assignment for Reinforcement Learning in Diffusion Language Models

DTCA: Denoising Token Credit Assignment for Reinforcement Learning in Diffusion Language Models, shared by Hugging Face, aims to improve the reinforcement learning process in diffusion language models. The study introduces a new credit assignment method to determine the contribution of each token to the final output during the iterative denoising phase.

📖 Glossary of Industry Terms

6 terms

IDE

A comprehensive software tool that allows software developers to perform coding, editing, and debugging operations from a single location.

CRM

A management system that allows companies to track their interactions with customers, communication history, and sales processes.

API

A connection interface that allows different software programs to communicate and exchange data with each other.

WiFi

A network technology that allows devices to connect to the internet or to each other wirelessly.

fingerprinting

A method used by internet browsers to uniquely identify a user by collecting device information.

touch display

Hardware that allows interaction via a screen, which can be commanded by touch.
