Data captured October 25, 2026 at 7:49 AM.

Report source counts and item metadata are fixed at capture time. Discovery pages may show newer live source values.

The summaries and translations in this report are prepared with AI. Before making important decisions, please check the source through the link provided with each item.

GitHub Trending

7 highlights

01 aws/agent-toolkit-for-aws

back in the spotlight

The aws/agent-toolkit-for-aws offered by Amazon Web Services includes official tools, plugins, and Model Context Protocol (MCP) servers that enable AI agents to develop, deploy, and manage applications on AWS. This Python-based toolkit allows AI agents to work more compatibly with AWS infrastructure in software development processes.

Python · ★ 3,178 · +13 today https://github.com/aws/agent-toolkit-for-aws Report an error

02 Nutlope/hallmark

back in the spotlight

Nutlope/hallmark offers a design skill that prevents content created on AI-powered code editors like Cursor, Claude Code, and Codex from looking like it was generated by AI. This tool aims to visually individualize standard AI outputs that emerge during software development processes.

CSS · ★ 32,343 · +455 today https://github.com/Nutlope/hallmark Report an error

03 pbakaus/impeccable

back in the spotlight

pbakaus/impeccable offers a design language and guidance system that AI coding agents can use when designing interfaces. Developed in Rust, this tool aims to improve frontend designs generated by AI through 24 commands and 62 deterministic detector rules.

Rust · ★ 86,572 · +619 today https://github.com/pbakaus/impeccable Report an error

04 pollen-robotics/microduck

microduck, developed by Pollen Robotics, is a 25-centimeter bipedal duck robot project powered by a Rockchip RK3566 processor. The software, written in Rust, manages fifteen servos via neural policies to execute the robot's movement and control processes.

Rust · ★ 11,089 · +319 today https://github.com/pollen-robotics/microduck Report an error

05 google-gemini/gemini-cli

gemini-cli, developed by Google, is an open-source (source code accessible to everyone) tool that provides direct access to the Gemini AI model via the terminal. The software allows users to create AI prompts quickly and lightweight in a command-line environment.

TypeScript · ★ 108,165 · +44 today https://github.com/google-gemini/gemini-cli Report an error

06 jbiaojerry/ebook-treasure-chest

jbiaojerry/ebook-treasure-chest is a digital library project that aggregates e-book download links across various categories. The project aims to provide access to content within popular reading applications (Fanhu, Wechat Reading, JD Reading, Ximalaya).

Python · ★ 22,774 · +227 today https://github.com/jbiaojerry/ebook-treasure-chest Report an error

07 makecindy/cindy

Cindy is an open-source (source code open for access and development) AI agent designed to complete real work in your projects and applications, working right out of the box. It combines multiple models and tools into a single structure, allowing users to manage their workflows.

TypeScript · ★ 4,198 · +477 today https://github.com/makecindy/cindy Report an error

Hacker News

4 highlights

01 Show HN: Steal My Bitcoin

Steal My Bitcoin is a platform created to test how a recently discovered PHP remote code execution (RCE) vulnerability can be exploited in the real world. The developer invites users to access the system to observe the concrete effects of this security vulnerability.

440 points · 264 comments https://stealmybitcoin.com/ Report an error

Discussion: news.ycombinator.com/item?id=50224916 (440 points · 264 comments)

02 The Goose Programming Language

The Goose is a new programming language designed for low-level system programming languages. It aims to develop system software with a structure focused on memory safety and performance.

304 points · 186 comments https://aardappel.github.io/goose/ Report an error

Discussion: news.ycombinator.com/item?id=50224100 (304 points · 186 comments)

03 Node2Shell evolves to HTTP2Shell, blast radius affects many HTTP libs and apps

The evolution of the Node2Shell vulnerability into HTTP2Shell puts numerous HTTP libraries and applications that use the Brotli data compression algorithm at risk. To avoid being affected by this vulnerability, coded as CVE-2026-111497, it is necessary to check the versions used and perform updates.

294 points · 140 comments https://www.aikido.dev/blog/python-packages-vulnerable-node2shell-brotli-cve-2026-111497 Report an error

04 I don't understand quantum physics (2018)

This resource, prepared by the University of Southampton, covers the fundamental concepts of quantum physics and the difficult-to-understand points in this field. Focusing on the complexity of physical phenomena, the study explains the principles of quantum physics within an academic framework.

291 points · 235 comments https://www.southampton.ac.uk/~doug/quantum_physics/index.html Report an error

Hugging Face · Daily Models

1 highlights

01 XHToken/Spark-X2.6-4B

Spark-X2.6-4B, published on the Hugging Face platform, is an artificial intelligence model focused on text generation. Using the same architecture as its previous version, the model offers performance improvements in areas such as coding, reasoning, and multilingual content processing thanks to post-training improvements.

📖 Glossary of Industry Terms

9 terms

MCP

A connection protocol that enables artificial intelligence models to communicate with different data sources and tools in a standardized way.

---

design skill

A visual editing capability that makes AI-generated content appear more natural and human-made.

---

deterministic detector rules

A control mechanism that allows software to detect errors or specific features through a precise and immutable set of rules.

---

frontend

The side of a website or application that is seen and interacted with by the user.

---

neural policies

Decision-making rules determined by artificial neural networks to control a robot's movements.

---

terminal

An interface that allows providing text-based instructions to a computer via a command line.

---

remote code execution - RCE

A serious security vulnerability that allows an attacker to remotely control software on another computer and execute their own code.

---

quantum physics

The branch of physics that studies the behavior and energy levels of subatomic particles.

---

text-generation

The ability to generate meaningful and coherent texts according to given prompts.

---
