6 highlights

01 nightly-labs/openbot

nightly-labs/openbot is a desktop application that allows you to manage AI coworkers through local-first workspaces. It enables you to use models such as Codex, Claude, and Grok with features including file sharing, browser control, and inter-agent collaboration.

TypeScript · ★ 2,151 · +794 today https://github.com/nightly-labs/openbot Report an error

---

02 obra/superpowers back in the spotlight

obra/superpowers is a capability framework and software development methodology developed for AI agents that write code. It aims to standardize software development processes for agents through composable capabilities and steering instructions.

Shell · ★ 306,178 · +608 today https://github.com/obra/superpowers Report an error

---

03 gitroomhq/postiz-app

gitroomhq/postiz-app is an agentic scheduling tool for planning social media content. Developed in TypeScript, this application allows users to automate their social media posts.

TypeScript · ★ 39,093 · +953 today https://github.com/gitroomhq/postiz-app Report an error

---

04 affaan-m/ECC back in the spotlight

affaan-m/ECC offers a performance improvement system focused on capabilities, memory, and security for AI coding tools (Claude Code, Codex, Opencode, Cursor). Developed with JavaScript, this structure aims to increase the efficiency of AI models used in software development processes.

JavaScript · ★ 290,571 · +1,183 today https://github.com/affaan-m/ECC Report an error

---

05 HKUDS/DeepTutor back in the spotlight

HKUDS/DeepTutor offers an AI-based learning workspace that integrates educational processes such as tutoring, problem solving, and test generation into a single system. Focused on lifelong personalized tutoring, this system combines visualization and expertise practices in an extensible structure.

Python · ★ 45,450 · +1,587 today https://github.com/HKUDS/DeepTutor Report an error

---

06 togg53192-cmd/jailbreaks

togg53192-cmd/jailbreaks offers a collection of system prompts, persona locks, and workspace policies aimed at bypassing the security restrictions of artificial intelligence models. This work serves as a technical compilation intended to alter the operating principles of various open-weight and closed models.

★ 5,175 · +890 today https://github.com/togg53192-cmd/jailbreaks Report an error

01 The Exponential Time Hypothesis Is False [pdf]

The paper published by OpenAI suggests that the Exponential Time Hypothesis, a fundamental assumption in computational complexity theory, is false. The study is presented as part of a broader research initiative announcing new discoveries in the fields of mathematics and computer science.

02 Roblox downloaded 145GB models from us (including adult content) without asking

It is reported that Roblox has downloaded 145 GB of data without authorization from the 3D model platforms Open3DLab, SFMLab, and SmutBase. It is estimated that the data in question was collected for the purpose of artificial intelligence training.

03 The Mythical Man-Month in the Age of AI

The Mythical Man-Month in the Age of AI reevaluates the classic Brooks's Law on manpower and time management in software projects in light of today's artificial intelligence tools. The study examines how the use of generative AI changes the dynamics of productivity and team management in software development processes.

04 The US government is hiding secret court ruling about how it spies on Americans

It is alleged that the United States government has concealed a secret court order regarding the surveillance of citizens from the public. This development brings about debates concerning the legal boundaries of the state's digital monitoring activities and the principles of transparency.

05 Python's experimental JIT to be removed

The experimental just-in-time compilation feature in the Python programming language is being removed. This change indicates that the experimental code structure added to improve the language's performance will be removed from the project.

Hugging Face · Daily Papers

5 highlights

01 ThinkBit: Search Codewords, Recalibrate Scales, Select by Reasoning

ThinkBit, published on Hugging Face, is a two-bit weight quantization framework developed to preserve reasoning capabilities. This method aims to reduce the inference costs of reasoning-focused language models that require high memory bandwidth.

0 likes · 1 comments https://huggingface.co/papers/2610.34886 Report an error

02 iPrefBench: A User-Centric Benchmark for Personalized Mobile Use Agents

iPrefBench is a benchmark tool developed to evaluate artificial intelligence agents that execute personalized tasks based on user preferences on mobile devices. This study presents an approach that aims for agents to complete missing user requests by inferring from past activities or by consulting the user directly.

03 Semantic Concept Steering Breaks the Explanation Drift Loop in Continual Learning

The focus is on the problem of explanation drift, where models shift their focus to erroneous correlations while maintaining prediction accuracy during continual learning processes. This study proposes a semantic concept steering method to resolve the self-referential loop created by pixel-level saliency regularization.

04 Learning from Automatic 3D Gaussian Splatting Edits for Online Bayesian Scene Change Detection

Learning from Automatic 3D Gaussian Splatting Edits for Online Bayesian Scene Change Detection presents a method that learns from 3D Gaussian Splatting (3DGS) model edits for online scene change detection. The study develops an approach that utilizes automatic edits to reduce computational costs in Bayesian inference processes.

05 Intrinsic Goals for Autonomous Agents: Hierarchical Exploration Captures Future Volitional Action in Drosophila

The paper shared on Hugging Face examines the computational mechanisms underlying the autonomous exploration behaviors exhibited by fruit flies (Drosophila melanogaster) without external stimuli. The study combines brain recordings with a neuromechanical digital twin to investigate whether internally motivated exploration processes can serve as a model for artificial intelligence agents.

📖 Glossary of Industry Terms

12 terms

generative AI

Artificial intelligence technology capable of generating new content such as text, images, or code based on given prompts.

---

local-first

A mode of operation that prioritizes storing and processing data directly on the user's own device without being connected to the internet.

---

framework

A set of ready-made structures and rules used to perform specific functions while developing software.

---

agentic

Artificial intelligence systems that can make decisions on their own without human intervention, and plan and execute steps to achieve their goals.

---

lifelong personalized tutoring

Lifelong personal education support that continuously adapts to the user's learning pace and needs.

IDE

A comprehensive software development tool that makes it easier for developers to write, edit, and debug code.

---

system prompts

Fundamental instructions that determine how an artificial intelligence model should behave and which rules it must follow.

---

open-weight

The state in which the internal parameters of a trained artificial intelligence model are open for everyone to access and use.

Exponential Time Hypothesis

A theoretical assumption arguing that the solution to some computational problems becomes exponentially difficult as the input size increases.

---

just-in-time compilation

A method of increasing processing speed by translating program code into machine language at runtime.

---

two-bit

A compression level that allows an artificial intelligence model to consume less memory by reducing its weights to a very low data size.

---

quantization

The process of reducing the precision of numerical values to shrink the footprint and speed up artificial intelligence models.
