01 Nvidia agrees to acquire Hugging Face for \$13B

Nvidia has agreed to acquire Hugging Face, an open-source platform for AI models, for \$13 billion. This move strengthens hardware manufacturer Nvidia's presence in the software ecosystem and its access to AI development tools.

02 Tim Curry has died

British actor Tim Curry, known for his iconic roles in productions such as *The Rocky Horror Picture Show* and *It*, has passed away at the age of 80. The artist, who had a large fan base in the world of cinema and theater, brought to life many characters remembered for his versatile acting.

03 CEO fired developers to make room for AI. Developers create open source AI CEO

After a company laid off its software developers and replaced them with AI, developers created an open-source AI manager (OpenExecutive) that automates corporate management processes. This project aims to digitize management processes by moving corporate decision-making mechanisms to a code-based structure.

01 SWE Refactor Bench: Can Coding Agents Complete a Long-Horizon, Whole-Repository Stack Migration?

SWE Refactor Bench is a new evaluation tool that measures the ability of software agents to perform complex stack migrations across an entire repository. By overcoming the blindness issues caused by existing tests, it mandates that agents not only pass tests but truly transform the codebase.

02 A Modular Agent for Reliable and Auditable Spatial Relation Verification in CT Scans

The modular agent developed for spatial relationship verification in computed tomography (CT) scans aims to enhance the visual reasoning capability of medical imaging systems. It aims to resolve the errors that existing vision-language models experience when performing spatial inference, using a verifiable and reliable structure.

03 RetrievalRouter: Joint Modality and Architecture Selection for Document Retrieval

RetrievalRouter is a system that automatically selects the method and architecture needed for document retrieval processes. In complex documents used in fields such as finance and healthcare, it optimizes the balance between speed and accuracy to determine the most appropriate retrieval pipeline.

04 Real-TurnTurk: A Multimodal Turkish Corpus for Turn-Taking Prediction

Real-TurnTurk is a multimodal dataset developed to model turn-taking dynamics in natural Turkish conversations. Containing unscripted dyadic interactions, this study allows simultaneous dialogue systems to more accurately predict the flow of human speech.

05 Is Next-Chunk Reasoning RL Really Better than SFT? Revisiting Training Strategies under no-CoT Data

A new study proposes the next-chunk reasoning reinforcement learning method for training models with data that does not contain explicit chain-of-thought labels. This approach allows the model to generate implicit reasoning traces, offering a training strategy alternative to standard supervised fine-tuning methods.

01 Changes to SourceHut's terms of service regarding LLMs

The software development platform SourceHut has updated its terms of service to prohibit the unauthorized use of content on the platform for training generative AI models. With this change, it aims to create a legal protective shield against the collection of code and data shared by users for commercial purposes by artificial intelligence companies.

02 Haiku R1/beta6 released

The open-source operating system project Haiku has released version R1/beta6. The update offers improvements to hardware drivers and the user interface while increasing the stability of the system.

99 points · 5 comments <https://www.haiku-os.org/get-haiku/r1beta6/release-notes/>

03 Merchants of Insecurity

The concept of 'merchants of insecurity' criticizes how cybersecurity companies position their products using fear-based marketing strategies. Instead of managing real risks, this approach directs security spending in the software industry by creating a constant perception of need based on uncertainty.
