DAILY TECHNOLOGY REPORT

Today's Technology Trends

June 4, 2026 (Thursday)

A FEW SIPS

Today's technology agenda is shaped around tools that automate document processing processes and autonomous agent architectures developed for large language models. Open source security scanners and interface improvements focus on increasing both the data processing capacity and operational security of systems.

24 HIGHLIGHTS · ~36 MIN READ

14 GitHub Trending

5 Hacker News

5 HuggingFace · Daily Models

01 chopratejas/headroom

Headroom reduces token usage by 60 to 95 percent by compressing log files, code output, and information retrieval (RAG) fragments sent to large language models (LLM). The library aims to reduce data processing costs with proxy server (proxy) and Model Context Protocol (MCP) server options.

Python · ★ 10,887 · +3,530 today <https://github.com/chopratejas/headroom>

02 affaan-m/ECC

ECC provides an agent performance system that optimizes the capability, memory and security layers for developer tools such as Claude Code and Cursor. The system is designed to make the workflows of artificial intelligence agents used in software development processes more efficient.

JavaScript · ★ 206,286 · +2,141 today <https://github.com/affaan-m/ECC>

03 aquasecurity/trivy

Trivy is a comprehensive security scanning tool that detects vulnerabilities, misconfigurations, and secrets in containers, Kubernetes clusters, and cloud infrastructures. It automates security audits in development processes with the ability to create software bill of materials (SBOM).

Go · ★ 35,511 · +24 today <https://github.com/aquasecurity/trivy>

04 NousResearch/hermes-agent

Developed by NousResearch, Hermes Agent offers an autonomous agent infrastructure that learns from user interactions and develops over time. This Python-based system uses continuous learning to create personalized workflows.

Python · ★ 179,808 · +1,735 today <https://github.com/NousResearch/hermes-agent>

05 microsoft/markitdown

Developed by Microsoft, MarkItDown is a Python tool that converts various file formats and office documents into markdown language (Markdown) format. This tool makes it easy to translate unstructured data into more processable text formats for large language models.

Python · ★ 143,384 · +1,984 today <https://github.com/microsoft/markitdown>

06 nesquena/hermes-webui

Hermes WebUI is an interface developed to manage Hermes agents via web browsers or mobile devices. This Python-based tool provides a platform that facilitates users' interaction with artificial intelligence agents.

Python · ★ 13,256 · +719 today <https://github.com/nesquena/hermes-webui>

07 D4Vinci/Scrapling

Scrapling is an adaptive web scraping framework that manages the entire process from single requests to comprehensive crawling operations. This Python-based tool is designed to simplify complex data collection tasks.

Python · ★ 60,629 · +1,067 today <https://github.com/D4Vinci/Scrapling>

08 opendataloader-project/opendataloader-pdf

OpenDataLoader PDF is an open source PDF parser that makes data available for artificial intelligence models. This Java-based project speeds up data processing processes by automating the accessibility of PDF documents.

Java · ★ 23,530 · +570 today <https://github.com/opendataloader-project/opendataloader-pdf>

09 odoo/odoo

Odoo is an open source enterprise resource planning platform that allows businesses to manage all their operational processes under a single roof. Developed with Python language, this system offers a wide range of modular business applications from sales to accounting.

Python · ★ 52,082 · +29 today <https://github.com/odoo/odoo>

10 Open-LLM-VTuber/Open-LLM-VTuber

Open-LLM-VTuber supports hands-free voice interaction with large language models and live character animation (Live2D) support that allows voice interruption to run on local systems. This project, which has cross-platform compatibility, automates artificial intelligence-supported virtual publishing processes.

Python · ★ 9,185 · +693 today <https://github.com/Open-LLM-VTuber/Open-LLM-VTuber>

11 jwasham/coding-interview-university

Coding-interview-university offers a comprehensive study plan covering the basics of computer science for those who want to become software engineers. This resource combines the theoretical and practical knowledge needed in preparation for technical interviews with a structured curriculum.

★ 349,290 · +330 today <https://github.com/jwasham/coding-interview-university>

12 lyogavin/airllm

AirLLM allows large language models with 70 billion parameters to be run on graphics processing units with only 4 GB of video memory (VRAM). This library uses memory optimization techniques to enable the use of high-capacity models with low hardware requirements.

Jupyter Notebook · ★ 19,113 · +208 today <https://github.com/lyogavin/airllm>

13 **supermemoryai/supermemory**

Supermemory offers a scalable memory engine and application interface for the age of artificial intelligence. This structure, developed with TypeScript, provides a specialized memory programming interface (Memory API) for fast processing and management of data.

TypeScript · ★ 25,363 · +600 today <https://github.com/supermemoryai/supermemory>

14 **HKUDS/Vibe-Trading**

Vibe-Trading offers a personal trading agent developed for trading in financial markets. The project allows users to manage automatic trading strategies with its Python-based structure.

Python · ★ 10,343 · +197 today <https://github.com/HKUDS/Vibe-Trading>

01 Gemma 4 12B: A unified, encoder-free multimodal model

Google announced Gemma 2 12B, a multimodal artificial intelligence model that can process text and visual data in a single architecture. Thanks to its encoder-free structure, the model aims to create more consistent responses by directly processing visual and textual inputs.

02 Elixir v1.20: Now a gradually typed language

Elixir v1.20 version adds graded typing support to the core of the language. This update aims to reduce runtime errors by allowing developers to perform static type checking in their code bases.

03 I was recently diagnosed with anti-NMDA receptor encephalitis

Software developer Andrew Gallant shares his health recovery after being diagnosed with anti-NMDA receptor encephalitis and the effects of this rare neurological condition on daily life. This narrative, focused on personal experience, draws attention to the complexity of medical diagnosis processes and the repercussions of health problems on professional life.

04 "They're made out of weights"

This study, which examines the working principle of large language models through weights, explains that the complex reasoning processes of artificial intelligence systems actually consist of the interaction of mathematical coefficients. The article provides a technical overview of the data processing mechanisms underlying the learning and prediction capabilities of models.

05 Uber's \$1,500/month AI limit is a useful signal for AI tool pricing

Uber is setting a new benchmark in software tools' pricing strategies by imposing a \$1,500 monthly spending cap on enterprise AI use. This practice shows that usage-based pricing models, which companies use to keep their operational costs under control, are becoming widespread.

01 nvidia/LocateAnything-3B

Developed by NVIDIA, LocateAnything-3D is an image-text-to-text model that performs object localization tasks by processing visual and textual inputs. The model is designed to identify objects in complex scenes and present the coordinates of these objects as text-based output.

♥ 1,210 · 91,834 downloads <https://huggingface.co/nvidia/LocateAnything-3B>

02 LiquidAI/LFM2.5-8B-A1B

Developed by LiquidAI, LFM2.5-8B-A1B was introduced as a model focused on text generation. The model aims to provide efficiency in language processing processes with its high-performance computing architecture.

♥ 486 · 72,114 downloads <https://huggingface.co/LiquidAI/LFM2.5-8B-A1B>

03 HauhauCS/Qwen3.6-35B-A3B-Uncensored-HauhauCS-Aggressive

The Qwen3.6-35B-A3B-Uncensored-HauhauCS-Aggressive model shared on HuggingFace is an artificial intelligence model that produces text output by processing visual and text data (image-text-to-text). The model offers the ability to analyze different data types with its uncensored structure.

♥ 1,368 · 2,646,756 downloads <https://huggingface.co/HauhauCS/Qwen3.6-35B-A3B-Uncensored-HauhauCS-Aggressive>

04 openbmb/MiniCPM5-1B

Developed by OpenBMB, MiniCPM5-1B is a low-parameter language model optimized for text generation tasks. This model, which aims to provide high performance in limited computing resources, is among the efficient artificial intelligence (AI) solutions.

♥ 762 · 79,427 downloads <https://huggingface.co/openbmb/MiniCPM5-1B>

05 google/gemma-4-12B-it

Developed by Google, Gemma 2 12B offers a multi-modal (any-to-any) model structure that can convert between different data types. This model provides a flexible AI experience by processing various types of input such as text and images.

♥ 274 · 14,866 downloads <https://huggingface.co/google/gemma-4-12B-it>
