Today's Technology Trends

July 5, 2026 (Sunday)

A FEW SIPS

Artificial intelligence agents (AI agents) and browser-based automation tools have gained dominant momentum in software development processes today. Protocols that work especially integrated with developer tools create a new standard that focuses on increasing efficiency in code writing processes.

28 HIGHLIGHTS · ~42 MIN READ

18 GitHub Trending

5 Hacker News

5 HuggingFace · Daily Models

01 openai/codex-plugin-cc

Developed by OpenAI, the Codex plugin allows code review processes and task delegation via Claude Code. This integration aims to increase efficiency by combining the capabilities of different artificial intelligence models in software development workflows.

JavaScript · ★ 24,850 · +718 today <https://github.com/openai/codex-plugin-cc>

02 JuliusBrussee/caveman

Caveman is a capability package used on Claude Code that simplifies the language structure and reduces token usage by 65 percent. This tool aims to reduce transaction costs by allowing artificial intelligence models to communicate with less data.

JavaScript · ★ 84,234 · +1,089 today <https://github.com/JuliusBrussee/caveman>

03 alibaba/page-agent

Developed by Alibaba, page-agent is a graphical user interface (GUI) agent that allows controlling web interfaces using natural language commands. Written in TypeScript, this tool aims to manage interactive elements on web pages through natural language processing.

TypeScript · ★ 23,327 · +742 today <https://github.com/alibaba/page-agent>

04 usestrix/strix

Strix is an open source artificial intelligence-supported penetration testing tool developed to detect and fix security vulnerabilities in applications. This tool, written in Python language, aims to speed up vulnerability scanning processes by automating software security.

Python · ★ 36,355 · +1,904 today <https://github.com/usestrix/strix>

05 ChromeDevTools/chrome-devtools-mcp

Developed for Chrome DevTools, this server enables coding-focused artificial intelligence agents to manage in-browser debugging and review processes. It allows agents to interact with web pages and directly process technical data through the Model Context Protocol.

TypeScript · ★ 45,864 · +304 today <https://github.com/ChromeDevTools/chrome-devtools-mcp>

06 Zackriya-Solutions/meetily

Meetily is an open source meeting assistant that processes meeting recordings locally and does not require a cloud connection. Developed in Rust, the application offers fast voice transcription, speaker diarization and summarization capabilities with local language models.

Rust · ★ 15,565 · +718 today <https://github.com/Zackriya-Solutions/meetily>

07 asgeirtj/system_prompts_leaks

System prompts of popular major language models are compiled in a central repository for security research and analysis of model behavior. This resource makes transparently available the basic configuration instructions that developers such as Anthropic, OpenAI, Google and xAI apply to their models.

JavaScript · ★ 49,146 · +471 today https://github.com/asgeirtj/system_prompts_leaks

08 harvard-edge/cs249r_book

This resource, prepared by Harvard University, offers a comprehensive technical guide on machine learning systems. It details the development processes of scalable artificial intelligence models, focusing on the interaction between hardware and software.

Python · ★ 26,644 · +443 today https://github.com/harvard-edge/cs249r_book

09 rommapp/romm

Romm is a self-hosted game archive manager developed for organizing game libraries and playing through the browser. Written in Python, this platform offers a visually oriented interface for managing digital game collections.

Python · ★ 10,302 · +398 today <https://github.com/rommapp/romm>

10 ogulcancelik/herdr

Developed with the Rust language, herdr functions as an agent multiplexer that allows managing multiple artificial intelligence agents simultaneously on the terminal. It allows users to interact with different artificial intelligence models simultaneously via the command line.

Rust · ★ 11,608 · +707 today <https://github.com/ogulcancelik/herdr>

11 dotnet/skills

Developed for .NET and C#-based artificial intelligence coding agents, this library offers specialized skill packages that support software development processes. It allows developers to standardize automation tools and execute coding tasks efficiently.

C# · ★ 3,872 · +59 today <https://github.com/dotnet/skills>

12 agentskills/agentskills

Agent Skills provides a standard framework (specification) for defining and documenting the capabilities of artificial intelligence agents. This structure aims to facilitate capability sharing and interoperability between different agent systems.

Python · ★ 22,409 · +351 today <https://github.com/agentskills/agentskills>

13 **immich-app/immich**

Immich is a high-performance self-hosted media management solution developed to manage photo and video files. Written in TypeScript, this platform allows users to create a central media archive on their own infrastructure.

TypeScript · ★ 105,748 · +201 today <https://github.com/immich-app/immich>

14 **chthollyphile/folia-major**

Folia-major is a player interface that provides visualized lyric animations for local music files and online platforms. Developed with TypeScript, this tool aims to enrich the music listening experience with dynamic visual effects.

TypeScript · ★ 1,034 · +175 today <https://github.com/chthollyphile/folia-major>

15 **mattpocock/skills**

This repository, shared by Matt Pocock, brings together the scripts and skill packages used by software developers in artificial intelligence-supported coding tools. Developers can use these optimized ready-made configurations to improve the performance of generative AI models on platforms like Claude.

Shell · ★ 156,844 · +973 today <https://github.com/mattpocock/skills>

16 **CoplayDev/unity-mcp**

Unity MCP provides a bridge between large language models and the Unity editor, allowing asset management, scene control and code editing processes to be automated. This tool, which works through the Model Server Protocol (Model Context Protocol), allows artificial intelligence assistants to directly intervene in game development workflows.

C# · ★ 11,702 · +69 today <https://github.com/CoplayDev/unity-mcp>

17 **alirezarezvani/claude-skills**

Developed for Claude Code and various coding agents, this library offers more than 330 skill packages and over 70 special commands in different fields from engineering to marketing. This Python-based toolset provides customizable scripts to standardize AI-based workflows and increase productivity.

Python · ★ 20,244 · +136 today <https://github.com/alirezarezvani/claude-skills>

18 **crynta/terax-ai**

Terax-ai, as a terminal-oriented artificial intelligence local development environment (AI-native dev workspace), attracts attention with its low size structure of 7 megabytes. Developed with TypeScript, this tool offers developers the opportunity to code with artificial intelligence directly via the terminal.

TypeScript · ★ 8,121 · +62 today <https://github.com/crynta/terax-ai>

01 Leaking YouTube creators' private videos

It has been determined that private videos on YouTube have become accessible to unauthorized persons due to a security vulnerability in the platform's interface. This situation leads to the leakage of video files, which are kept secret by content producers, through their metadata.

577 points · 318 comments <https://javoriuski.com/post/youtube>

02 Command and Conquer Generals natively ported to macOS, iPhone, iPad using Fable

The open source project, developed using the Fable engine, makes the Command and Conquer Generals game natively executable on macOS, iPhone and iPad devices. This work enables old strategy games to be played on modern Apple hardware without the need for an additional emulation layer.

511 points · 211 comments <https://github.com/ammaarreshi/Generals-Mac-iOS-iPad/tree/main>

03 Google Books (or similar) all book scans – \$200k bounty (2025)

Anna's Archive platform has launched a \$200,000 bounty program to create a comprehensive digital library containing all scanned book data from Google Books and similar sources. This initiative aims to collect copyrighted or accessible works in a central data set.

426 points · 232 comments https://software.annas-archive.gl/AnnaArchivist/annas-archive/-/work_items/234

04 Potential session/cache leakage between workspace instances or consumer accounts

Claude Code users are reporting session or cache leakage between different workspace instances or consumer accounts. This indicates a technical weakness that may pose a data security risk between independent sessions.

288 points · 130 comments <https://github.com/anthropics/claude-code/issues/74066>

05 GPT-5.5 Codex reasoning-token clustering may be leading to degraded performance

It is argued that the reasoning-token clustering method in OpenAI models leads to a decrease in model performance in some cases. Users state that this clustering strategy increases the margin of error in code generation processes.

237 points · 82 comments <https://github.com/openai/codex/issues/30364>

01 empero-ai/Qwythos-9B-Claude-Mythos-5-1M-GGUF

Qwythos-9B, developed by Empero-ai, is a multimodal model that produces text output by processing visual and text data. The model is designed to optimize complex image and text analysis processes with high context window support.

♥ 1,479 · 1,464,047 downloads <https://huggingface.co/empero-ai/Qwythos-9B-Claude-Mythos-5-1M-GGUF>

02 zai-org/GLM-5.2

GLM-5.2, developed by Zai-org, is a language model optimized for text generation tasks. This model, which has attracted high interest on the Hugging Face platform, offers content creation capabilities in natural language processing processes.

♥ 3,410 · 208,920 downloads <https://huggingface.co/zai-org/GLM-5.2>

03 baidu/Unlimited-OCR

Developed by Baidu, Unlimited-OCR is an image-to-text model that processes visual texts and produces text output. It is designed to automate the process of converting data from complex documents into digital format.

♥ 1,718 · 988,379 downloads <https://huggingface.co/baidu/Unlimited-OCR>

04 deepreinforce-ai/Ornith-1.0-35B-GGUF

Ornith-1.0-35B, developed by Deepreinforce-ai, is a language model designed for text generation. The model can be run efficiently on different hardware configurations thanks to the GGUF format.

♥ 713 · 359,659 downloads <https://huggingface.co/deepreinforce-ai/Ornith-1.0-35B-GGUF>

05 nvidia/Qwen3.6-27B-NVFP4

Qwen3.6-27B-NVFP4 by Nvidia is a language model optimized for text-generation tasks. Trained with four-bit floating point (FP4) precision, this model supports high-performance inference processes.

♥ 259 · 184,521 downloads <https://huggingface.co/nvidia/Qwen3.6-27B-NVFP4>

token

The smallest unit of words or syllables divided into parts that artificial intelligence uses when processing texts.

page-agent

A software assistant that can read information on web pages and perform operations on behalf of the user.

GUI

Interface that allows you to visually manage computer programs through icons, buttons, and windows.

penetration testing

Controlled cyber attack attempts made deliberately by experts to test the security of a system.

Chrome DevTools

Developer tools available within the browser to examine and debug how websites work.

coding agents

Artificial intelligence tools that automatically write software code or fix errors based on commands given by the user.

Model Context Protocol

Standard method for securely connecting AI models to different data sources and applications.

transcription

The process of transcribing voice recordings or conversations into text.

speaker diarization

The process of determining who spoke when by distinguishing which person's voice in the audio recording came from.

system prompts

Initial instructions telling the AI how it should behave and what rules it should follow.

machine learning systems

Computer systems that learn on their own by analyzing data and can make more accurate decisions over time.

self-hosted

A method of running software on your own computer or private server rather than on another company's server.

terminal

A command line interface with a black screen that allows you to perform operations by typing text commands directly on the computer.

agent multiplexer

A system that manages multiple artificial intelligence assistants from a single center and shares the tasks among them.

skills

Special abilities that a software or artificial intelligence has to do a certain job.

specification

A detailed list of technical requirements that specify what a project or product should be like.
