DAILY TECHNOLOGY REPORT

Today's Technology Trends

July 11, 2026 (Saturday)

A FEW SIPS

In today's technology agenda, skill sets developed for autonomous software agents (AI agents) and performance-oriented tools at the system level stand out. Current data on GitHub shows that developers are focusing on both application runtime optimization and automating model-based workflows.

29 HIGHLIGHTS · ~44 MIN READ

19 GitHub Trending

5 Hacker News

5 HuggingFace · Daily Models

01 wonderwhy-er/DesktopCommanderMCP

DesktopCommanderMCP is a Model Context Protocol server developed for Claude that provides terminal control, file system searching and diff file editing capabilities to the artificial intelligence model. This tool enables AI agents to operate directly on local file systems.

TypeScript · ★ 7,453 · +328 today <https://github.com/wonderwhy-er/DesktopCommanderMCP>

02 oven-sh/bun

Bun is a high-performance tool that combines the JavaScript runtime, package manager, test runner and packager under one roof. Developed with the Rust language, this platform offers an integrated infrastructure to accelerate software development processes.

Rust · ★ 94,374 · +209 today <https://github.com/oven-sh/bun>

03 abseil/abseil-cpp

Developed by Google, Abseil offers open source code snippets that complement the C++ standard library. This library provides basic data structures and algorithms to improve code maintainability and performance in complex software projects.

C++ · ★ 17,545 · +89 today <https://github.com/abseil/abseil-cpp>

04 addyosmani/agent-skills

Developed by Addy Osmani, agent-skills offers production-level engineering skills for artificial intelligence coding agents. This library enables JavaScript-based agents to perform complex software tasks more reliably.

JavaScript · ★ 76,967 · +1,116 today <https://github.com/addyosmani/agent-skills>

05 jbeder/yaml-cpp

yaml-cpp is a library for the C++ programming language that parses and emitters data in YAML format. It allows software developers to manage configuration files and perform data serialization operations.

C++ · ★ 6,101 · +69 today <https://github.com/jbeder/yaml-cpp>

06 mattpocock/skills

This repository, shared by Matt Pocock, contains prompts and configuration files prepared for software engineers to use artificial intelligence tools such as Claude more efficiently. Thanks to these ready-made skill packages, developers standardize their workflows by automating complex coding tasks.

Shell · ★ 164,906 · +1,712 today <https://github.com/mattpocock/skills>

07 obra/superpowers

Superpowers offers an agentic skills framework and software development methodology for artificial intelligence agents. This tool is designed to configure agent-based workflows and standardize operational processes.

Shell · ★ 251,949 · +1,013 today <https://github.com/obra/superpowers>

08 microsoft/TypeScript

TypeScript, a superset of the JavaScript language, allows error checking during the compilation phase of the code. It supports more reliable and scalable software development processes with its static typing feature.

TypeScript · ★ 109,817 · +177 today <https://github.com/microsoft/TypeScript>

09 catchorg/Catch2

Catch2 is a modern unit testing framework that supports C++14 and later. It is designed to support test-driven development (TDD) and behavior-driven development (BDD) practices in software development processes.

C++ · ★ 20,636 · +76 today <https://github.com/catchorg/Catch2>

10 chriskohlhoff/asio

Asio is a C++ library developed for asynchronous I/O operations. It provides a portable gateway (network abstraction) for network programming and low-level system tasks.

C++ · ★ 6,090 · +92 today <https://github.com/chriskohlhoff/asio>

11 TencentCloud/TencentDB-Agent-Memory

TencentDB Agent Memory offers native long-term memory support for artificial intelligence agents (AI Agents) without external application programming interface (API) dependency. Using a four-stage progressive pipeline structure, this tool enables data to be processed and stored locally.

TypeScript · ★ 8,308 · +123 today <https://github.com/TencentCloud/TencentDB-Agent-Memory>

12 davila7/claude-code-templates

Claude Code templates provide a command line interface (CLI) for the Claude Code tool that simplifies configuration and monitoring. This Python-based tool standardizes developers' control over the coding assistant and workflow management.

Python · ★ 28,812 · +118 today <https://github.com/davila7/claude-code-templates>

13 zeux/meshoptimizer

The Meshoptimizer library optimizes three-dimensional mesh data, reducing file sizes and increasing rendering performance. Developed in C++, this tool organizes geometric data to improve memory usage in graphics applications.

C++ · ★ 8,045 · +91 today <https://github.com/zeux/meshoptimizer>

14 tailscale/tailscale

Tailscale makes it easier to establish secure network connections by combining the WireGuard protocol with two-factor authentication. Developed with the Go language, this tool provides encrypted communication between devices without the need for complex network configurations.

Go · ★ 33,734 · +143 today <https://github.com/tailscale/tailscale>

15 google-labs-code/stitch-skills

Developed by Google Labs, Stitch Skills is an agent skills library designed to work with the Stitch MCP server. Following open standards, this library aims to standardize workflows for coding agents such as Gemini CLI and Cursor.

TypeScript · ★ 6,814 · +117 today <https://github.com/google-labs-code/stitch-skills>

16 iOfficeAI/OfficeCLI

OfficeCLI is an open source office software developed for artificial intelligence agents to read, edit and automate Word, Excel and PowerPoint files. This single executable file (single binary), which does not require Microsoft Office installation, was created in C# language.

C# · ★ 14,593 · +1,224 today <https://github.com/iOfficeAI/OfficeCLI>

17 hashicorp/terraform

Developed by HashiCorp, Terraform defines infrastructure as code, allowing it to be created in a safe and predictable manner. Written in the Go language, this tool converts application programming interfaces (APIs) into declarative configuration files, allowing teams to manage infrastructure processes under version control.

Go · ★ 49,219 · +172 today <https://github.com/hashicorp/terraform>

18 grpc/grpc

gRPC is an open source remote procedure call framework that provides high-performance communication between different programming languages. Thanks to its C++-based infrastructure, it allows the development of scalable network services for languages such as Python, Ruby, C# and PHP.

C++ · ★ 45,162 · +78 today <https://github.com/grpc/grpc>

19 vercel/next.js

Next.js is a framework used to develop React-based web applications and provides features such as server-side rendering and static site generation. It is becoming a common choice among developers as it offers performance-oriented optimizations and scalable infrastructure solutions in modern web projects.

JavaScript · ★ 140,777 · +191 today <https://github.com/vercel/next.js>

01 Apple sues OpenAI, accuses ex-employees of stealing trade secrets

Apple filed a lawsuit alleging that its former employees stole trade secrets within the company and shared them with OpenAI. The legal process in question brought about discussions about the protection of intellectual property rights in artificial intelligence development processes.

852 points · 423 comments <https://9to5mac.com/2026/07/10/apple-sues-openai-trade-secret-theft/>

02 Show HN: Getting GLM 5.2 running on my slow computer

The Colibri project optimizes the GLM 5.2 model so that large language models can be run on low-end computers. This work enables the efficient use of high-performance artificial intelligence models in local systems.

843 points · 208 comments <https://github.com/JustVugg/colibri>

03 QuadRF can spot drones and see WiFi through my wall

QuadRF can detect wireless network signals and unmanned aerial vehicles (drones) behind walls using radio frequency sensing technology. The device offers a tracking system that visualizes mobility beyond physical barriers by analyzing electromagnetic waves in the environment.

523 points · 184 comments <https://www.jeffgeerling.com/blog/2026/quadrf-can-spot-drones-and-see-wifi-through-my-wall/>

04 New York City to ban deceptive subscription practices

New York City is enacting new regulations banning subscription cancellation processes and auto-renewal practices that mislead consumers. This legal step requires cancellation procedures to be as easy and transparent as the membership initiation process.

487 points · 238 comments <https://www.theguardian.com/us-news/2026/jul/10/new-york-city-deceptive-subscriptions-ban>

05 GPT-5.6 Sol Ultra produces proof of the Cycle Double Cover Conjecture [pdf]

The GPT-5.6 Sol Ultra model announced that it proved the Cycle Double Cover Conjecture, which has not been solved for a long time in the mathematical world. This study demonstrates the competence of large language models in complex mathematical proof processes.

412 points · 322 comments https://cdn.openai.com/pdf/04d1d1e4-bc75-476a-97cf-49055cd98d31/cdc_proof.pdf

01 tencent/Hy3

Developed by Tencent, Hy3 is a language model optimized for text generation tasks. The model aims to increase performance in various natural language processing processes by training on large-scale data sets.

♥ 677 · 6,923 downloads <https://huggingface.co/tencent/Hy3>

02 empero-ai/Qwythos-9B-Claude-Mythos-5-1M-GGUF

The Qwythos-9B-Claude-Mythos-5-1M model is an image-text-to-text model that produces text output by processing visual and textual data. The model offers the opportunity to combine different data types in a single workflow with wide context window support.

♥ 1,985 · 1,909,705 downloads <https://huggingface.co/empero-ai/Qwythos-9B-Claude-Mythos-5-1M-GGUF>

03 zai-org/GLM-5.2

GLM-5.2, published by Zai-org, is a language model optimized for text-generation tasks. This model, which has attracted high interest on the Hugging Face platform, aims to improve content creation capabilities in natural language processing processes.

♥ 3,795 · 392,655 downloads <https://huggingface.co/zai-org/GLM-5.2>

04 InternScience/Agents-A1

Agents-A1, developed by InternScience, is an artificial intelligence model optimized for text generation tasks. This model provides a basic language processing infrastructure in the process of developing agent-based systems that can perform complex tasks.

♥ 476 · 25,772 downloads <https://huggingface.co/InternScience/Agents-A1>

05 baidu/Unlimited-OCR

Developed by Baidu, Unlimited-OCR is an image-to-text model that produces text output by processing image-based texts. The model is designed to optimize the process of converting data from complex documents into digital format.

♥ 1,922 · 1,319,683 downloads <https://huggingface.co/baidu/Unlimited-OCR>

terminal control

Methods used to manage the computer's command line screen and organize the text flow therein.

diff file editing

An editing method that detects the differences between the old and new version of a file and updates only the changed parts.

Model Context Protocol

The connection rule that enables AI models to communicate with different data sources in a secure and standard way.

runtime

The moment when a written program is run on the computer and the infrastructure that manages this process.

code snippets

Small, functional pieces of code that are pre-made to be used within a larger project.

engineering skills

Ability to solve complex problems in logical steps, design systems and use technical tools efficiently.

parser

A tool that divides complex data written in a way that the computer can understand into small pieces that the program can process.

emitter

A mechanism that converts processed data or code into an output format that another program can use.

serialization

The process of converting complex data structures into a plain text string suitable for saving to a file or sent over the internet.

prompt

A written instruction or question given to an artificial intelligence to obtain a specific result.

skills

Technical or practical abilities to do a job to a certain standard and efficiency.

agentic skills framework

The set of capabilities and working order that enable artificial intelligence systems to make decisions and complete tasks on their own.

superset

A more comprehensive structure that covers all the features of an existing system and adds new capabilities.

static typing

The rule that the types of data in the program are precisely determined at the writing stage before the code is run.

unit testing

Automated testing process that checks whether the smallest parts of the software work as expected.

TDD

A development method based on first preparing the test of the code to be written and then writing enough code to pass this test.
