DAILY TECHNOLOGY REPORT

Today's Technology Trends

August 1, 2026 (Saturday)

A FEW SIPS

Automation skills and systematic trading strategies in software development processes constitute the main agenda of the developer community today. The copilot development kit (copilot sdk) shared by Microsoft clearly reveals the standardization trend of artificial intelligence integrated tools.

22 HIGHLIGHTS · ~33 MIN READ

12 GitHub Trending

5 Hacker News

5 HuggingFace · Daily Models

01 zhaoxuya520/reverse-skill

Reverse-skill offers an artificial intelligence-supported routing package for reverse engineering and penetration testing processes. With its toolchain bootstrapping and self-developing knowledge base features, Claude Code integrates with coding tools such as Cursor and Cline.

PowerShell · ★ 11,014 · +335 today <https://github.com/zhaoxuya520/reverse-skill>

02 different-ai/openwork

Openwork is a software development tool that was developed as an open source alternative to the Claude Cowork platform and uses the opencode infrastructure. Prepared with TypeScript, the project aims to bring autonomous coding processes to the open source ecosystem.

TypeScript · ★ 19,654 · +806 today <https://github.com/different-ai/openwork>

03 mvanhorn/last30days-skill

Last30days-skill offers an artificial intelligence skill (AI agent skill) that creates summaries about complex topics by scanning current data from platforms such as Reddit, X, YouTube and Hacker News. This Python-based tool combines information from different sources to produce evidence-based syntheses for users.

Python · ★ 56,349 · +658 today <https://github.com/mvanhorn/last30days-skill>

04 paperswithbacktest/awesome-systematic-trading

Bringing together libraries, strategies, books and educational resources for systematic trading processes, this list gathers Python-based financial modeling tools at a central point. It serves as a comprehensive reference library for developers entering the world of algorithmic trading.

Python · ★ 11,878 · +763 today <https://github.com/paperswithbacktest/awesome-systematic-trading>

05 microsoft/AI-For-Beginners

Prepared by Microsoft, AI-For-Beginners offers a comprehensive artificial intelligence training program consisting of a 12-week curriculum and 24 lessons. This open source project, carried out through Jupyter Notebooks, provides participants with hands-on learning opportunities, starting from the basic level.

Jupyter Notebook · ★ 55,508 · +1,592 today <https://github.com/microsoft/AI-For-Beginners>

06 github/copilot-sdk

GitHub has released a multiplatform software development kit (SDK) that allows developers to integrate Copilot agents into their own applications and services. This tool allows artificial intelligence-supported workflows to be included in the system with a standard structure in Java-based projects.

Java · ★ 10,164 · +7 today <https://github.com/github/copilot-sdk>

07 **chatwoot/chatwoot**

Chatwoot is an open source platform that offers live chat, email support and omni-channel customer service management. Developed as an alternative to software such as Intercom and Zendesk, this tool allows centralizing customer interactions through a single panel.

Ruby · ★ 35,205 · +35 today <https://github.com/chatwoot/chatwoot>

08 **agavra/tuicr**

Developed with the Rust language, tuicr offers a terminal-based code review interface with support for Vim keybindings. It allows software developers to manage code review processes without leaving the terminal environment.

Rust · ★ 2,193 · +335 today <https://github.com/agavra/tuicr>

09 **usekaneo/kaneo**

Kaneo is an open source project management tool developed with a user-oriented interface. Written in TypeScript, the platform aims to create complexity-free workflows.

TypeScript · ★ 5,248 · +194 today <https://github.com/usekaneo/kaneo>

10 **geo-tp/ESP32-Bit-Pirate**

ESP32-Bit-Pirate is a hardware hacking tool that supports multiple communication protocols via a web-based command line interface (CLI). This system, developed in C++ language, facilitates hardware analysis processes by managing different protocols on a single platform.

C++ · ★ 5,115 · +83 today <https://github.com/geo-tp/ESP32-Bit-Pirate>

11 **deepfakes/faceswap**

Faceswap is an open source software that performs face swapping operations on videos and photos with its Python-based structure. It allows users to transform faces on visual content using deep learning techniques.

Python · ★ 57,075 · +93 today <https://github.com/deepfakes/faceswap>

12 **1jehuang/jcode**

Developed with the Rust language, jcode offers a code processing tool (harness) that minimizes memory usage. This structure, designed to efficiently manage system resources in software processes, provides high-performance code execution environments.

Rust · ★ 14,709 · +527 today <https://github.com/1jehuang/jcode>

01 Elevators

This study examines the operating logic and floor selection algorithms of elevators and focuses on efficiency optimization in vertical transportation systems. It analyzes distributed control strategies that reduce waiting times and save energy through software-based simulations.

1,130 points · 268 comments <https://john.fun/elevators>

02 qm – Multiplayer agent harness for work

qm offers an infrastructure that provides collaboration and task management for multiplayer AI agents. This tool allows different agents to execute tasks simultaneously in a shared workspace.

526 points · 110 comments <https://github.com/yc-software/qm>

03 Tailscale didn't stop the Hugging Face intrusion

The unauthorized access incident on Hugging Face shows that using a secure network (mesh VPN) alone is not enough to ensure system security. When secure network solutions are not supported by layered security measures such as authentication and access control, vulnerabilities may occur.

517 points · 195 comments <https://tailscale.com/blog/hugging-face-intrusion>

04 Twenty-five years ago it was cryptography, today it's model weights

The open source discussions that took place in the field of cryptography twenty-five years ago are being repeated today around the accessibility of artificial intelligence model weights. The world of technology is redefining the boundaries between open access and closed systems in order to balance security and innovation.

222 points · 108 comments <https://weeraman.com/because-we-can/>

05 Big Food vs. the People

The research, conducted by Lighthouse Reports, examines the lobbying efforts of major food companies to influence nutrition policies and their pressure on scientific data. The study provides concrete evidence of the strategies the food industry uses to circumvent public health regulations.

218 points · 142 comments <https://www.lighthousereports.com/investigation/big-food-vs-the-people/>

01 moonshotai/Kimi-K3

Developed by Moonshot AI, Kimi-K3 is a multimodal model that produces text-based outputs by processing visual and text inputs. The system offers the ability to analyze complex visual data and create meaningful text based on this data.

♥ 9,322 · 493,481 downloads <https://huggingface.co/moonshotai/Kimi-K3>

02 deepseek-ai/DeepSeek-V4-Flash-0731

DeepSeek-V4-Flash-0731 is a language model optimized for text generation tasks. It supports large-scale language processing with its low latency and high efficiency oriented architecture.

♥ 1,119 · 0 downloads <https://huggingface.co/deepseek-ai/DeepSeek-V4-Flash-0731>

03 DavidAU/Qwen3.6-27B-Fable-Fusion-711-Uncensored-Heretic-NM-DAU-NEO-MAX-MTP-GGUF

The Qwen3.6-27B-Fable-Fusion model is a multimodal artificial intelligence model that extends image-to-text capabilities. Thanks to its uncensored structure and optimized GGUF format, it provides high-performance text generation on local hardware.

♥ 1,161 · 1,119,057 downloads <https://huggingface.co/DavidAU/Qwen3.6-27B-Fable-Fusion-711-Uncensored-Heretic-NM-DAU-NEO-MAX-MTP-GGUF>

04 baidu/Unlimited-OCR

Unlimited-OCR, developed by Baidu, is a model that performs image-based text recognition (image-text-to-text) operations. It offers the ability to process the texts in the image and convert them into text-based outputs.

♥ 3,672 · 2,513,603 downloads <https://huggingface.co/baidu/Unlimited-OCR>

05 owensong/Inflect-Micro-v2

Inflect-Micro-v2 is a model developed for text-to-speech operations. It is designed to support high-quality sound synthesis processes with low resource consumption.

♥ 349 · 1,449 downloads <https://huggingface.co/owensong/Inflect-Micro-v2>

routing pack

A set of routing rules used in computer networks to ensure that data reaches its destination as quickly as possible.

toolchain bootstrapping

The process of building a software development tool from scratch so that it can build itself.

AI agent skill

The special ability or skill that an artificial intelligence software has to perform a specific task.

systematic trading

Making investment decisions based on predetermined rules and logical frameworks.

algorithmic trading

Stock market transactions are made automatically by pre-written computer codes instead of humans.

artificial intelligence

Computers have the ability to learn, make decisions and solve problems like humans.

Jupyter Notebooks

An interactive working environment that allows you to see codes, explanations and results on the same page.

SDK

A suite of tools that make it easier for developers to develop applications for a specific platform or device.

omni-channel

Offering an uninterrupted experience to the customer by connecting all sales channels of a brand.

keybindings

The process of assigning specific commands or shortcuts to keys on the keyboard.

code review

Examination of the written codes by another software developer in order to find errors or improve them.

project management

Planning and managing resources, time, and tasks to achieve a business' goals.

CLI

Text-based interface that runs programs with written commands rather than the mouse.

face swapping

The process of replacing a face in an image with another person using artificial intelligence.

deep learning

A method that allows computers to learn complex data by imitating neural networks in the human brain.

harness

An auxiliary tool used to test whether a software or system is working correctly.
