4 highlights

01 Renhuai123/ziwei-doushu

Renhuai123/ziwei-doushu is an open-source TypeScript engine based on Ni Haixia's Tianji system that calculates Ziwei Doushu astrological charts. The project provides a large 13-dimensional astrological interpretation dataset (v4.0) covering dates between 1950 and 2026.

02 SnailSploit/Claude-Red back in the spotlight

SnailSploit/Claude-Red is an offensive security skills library prepared for the Claude AI capability system. It provides expert methodologies for various attack surfaces, such as SQL injection and shellcode development, through structured files.

Python · ★ 8,603 · +226 today https://github.com/SnailSploit/Claude-Red Report an error

03 OpenBMB/VoxCPM back in the spotlight

Developed by OpenBMB, VoxCPM produces continuous speech representations directly in text-to-speech (TTS) processes thanks to its tokenizer-free structure. With its end-to-end diffusion autoregressive architecture, it offers multilingual speech generation, creative sound design, and realistic voice cloning capabilities.

---

04 nodejs/node back in the spotlight

Node.js is an open-source (source code accessible to everyone) runtime environment that allows JavaScript code to be executed outside the browser. This infrastructure, which can run on different operating systems, is widely preferred for server-side application development.

JavaScript · ★ 122,935 · +66 today https://github.com/nodejs/node Report an error

5 highlights

01 Local Wikipedia: Wikipedia, but only for things a half hour walk from you

Local Wikipedia is an encyclopedia project that provides information about places within a half-hour walking distance of the user's current location. Aiming to increase environmental awareness, this platform scales general Wikipedia content down to a local level.

02 Kimi K3.1 Pro and K3.1 Pro Highspeed

Kimi K3.1 Pro and Kimi K3.1 Pro Highspeed are among generative AI models. These models offer up-to-date options designed for users to perform complex tasks.

03 Today, we hacked what we'd set out to hack: the iPhone

Security researchers announced that they have successfully completed a hack they aimed to perform on an iPhone. This study refers to a technical process conducted regarding the smartphone's security vulnerabilities.

05 Canadians are running out of time to oppose Bill C-22

The bill codenamed Bill C-22, currently being discussed in the Canadian Parliament, has the potential to threaten the privacy and security rights of millions by expanding surveillance powers. There is limited time left for public reaction against the lawful access regulation, which has passed the House of Commons and is currently on the agenda of the Canadian Senate.

5 highlights

01 TARSphere: A Robot-Oriented Full-Stack Framework for Long-Horizon Embodied Agents in Evolving Physical and Social Environments

TARSphere is a full-stack framework developed for robotic agents moving under physical and social constraints. Operating on a physics simulator, the system aims for robots to adapt to changing environmental conditions and human needs with long-term goals.

02 The LLM-Attacker: A Unified Red-Team Framework for Privacy Evaluation of Split and Distributed LLM Systems

The LLM-Attacker provides a unified red-team framework for the privacy assessment of split and distributed large language model (LLM) systems. It aims to standardize data recovery processes by allowing researchers to record, compare, and extend different attack methods.

03 EvalResearchBench: Can AI Agents Build Their Own Feedback for Recursive Self-Improvement?

EvalResearchBench is a benchmark tool that investigates whether artificial intelligence agents can autonomously design the evaluation mechanisms they need for recursive self-improvement processes. This study aims to automate evaluation processes using software interfaces (APIs) to reduce the cost of complex tests.

04 Diffusion Language Models Change Speed Across Tasks and Languages

Diffusion language models generate multiple tokens in a single forward pass, dynamically determining the number of steps in the generation process based on the tasks. Research shows that tasks where input text is copied or edited are lower cost, while free-text generation is higher cost.

05 Different Tasks, Different Timesteps: Temporal Task-Aware Quantization for Diffusion Language Models

T 2Quant, developed for Diffusion Language Models (DLMs), reveals that quantization precision in the iterative denoising process varies according to task and time variables. This method offers a mixed-precision quantization strategy by predicting the precision requirements needed by different tasks without requiring label data.

📖 Glossary of Industry Terms

10 terms

runtime

A system that provides the resources and environment required for software to run.

API

A digital bridge that enables different software applications to exchange data and communicate with each other.

v4.0

A version number indicating that a piece of software or dataset has been developed to reach its fourth major release.

offensive security skills

Offensive security capabilities used to find weaknesses in systems and test those vulnerabilities.

shellcode

A small piece of machine code used to execute commands by exploiting security vulnerabilities in systems.

tokenizer-free

A structure that processes data directly as a continuous stream without breaking the text into small pieces.

TTS

Technology that converts written text into human speech via a computer.

diffusion autoregressive

An architecture used for audio or image generation that makes sequential predictions by creating data from noise.

runtime environment

A software environment that contains the libraries and system resources necessary for a program to run.

generative AI

Artificial intelligence capable of generating new content such as text, images, or audio based on data it has been previously trained on.
